actaro.

Train. Track. Progress.

Product design v1 redesign

Chalk and Carbon theme · Liquid glass navigation · 17 October 2026

PART 1	PART 2	PART 3	PART 4	SCOPE
Foundation	Train	Food and Progress	You and states	v0.1 – v1.0

Supersedes the 16 Oct screen atlas (commit 2bdfb31) as visual reference. Product behavior follows the Source of Truth. Screens marked v1.2 are concepts, not approved for implementation.

Five tabs and a quick-log button

More was a junk drawer that hid daily features. Every v1 feature now has a named home. Running joins Train in v1.2 instead of becoming a sixth tab.

Today

Bodyweight, steps, today's training, calories, macros, water, habits, recovery, goals.

Train

Workouts, splits, plans, library, history, training summary, recovery, equipment.

v1.2 · Run segment

Food

Diary, search, portions, custom foods, recipes, saved meals, targets, water.

Progress

Body, nutrition, training, activity, habits, weekly and monthly summary.

v1.2 · Running cards

You

Profile, habits, goals, body records, steps and activity, preferences, reminders, privacy.

Quick log +

Food, water, weight, steps, habit, start workout. Reachable from every tab.

v1.2 · Start run

LIGHT · CHALK

Canvas F1F2EE · Surface FFFFFF · Fill E6E8E3 · Ink 111311 · Muted 5E645E · Ember FF5A1F

DARK · CARBON

Canvas 0C0D0C · Surface 171917 · Fill 222522 · Ink F1F2EE · Muted 959B95 · Ember FF6A2C

List row
Supporting detail

Glass only on navigation: headers, tab bar, floating buttons and pinned action bars. Content stays solid. With Reduce Transparency, glass becomes solid surface at 96%. One ember action per screen, with ink text on ember for 4.5:1 contrast. Volt only for completed sets, done habits and real PRs. Ink carries neutral data; ember marks now or act. Tap targets at least 44 pt. Caveats sit behind an info icon or one muted line.

One template for verify, confirmed, expired link and change-email inbox states.

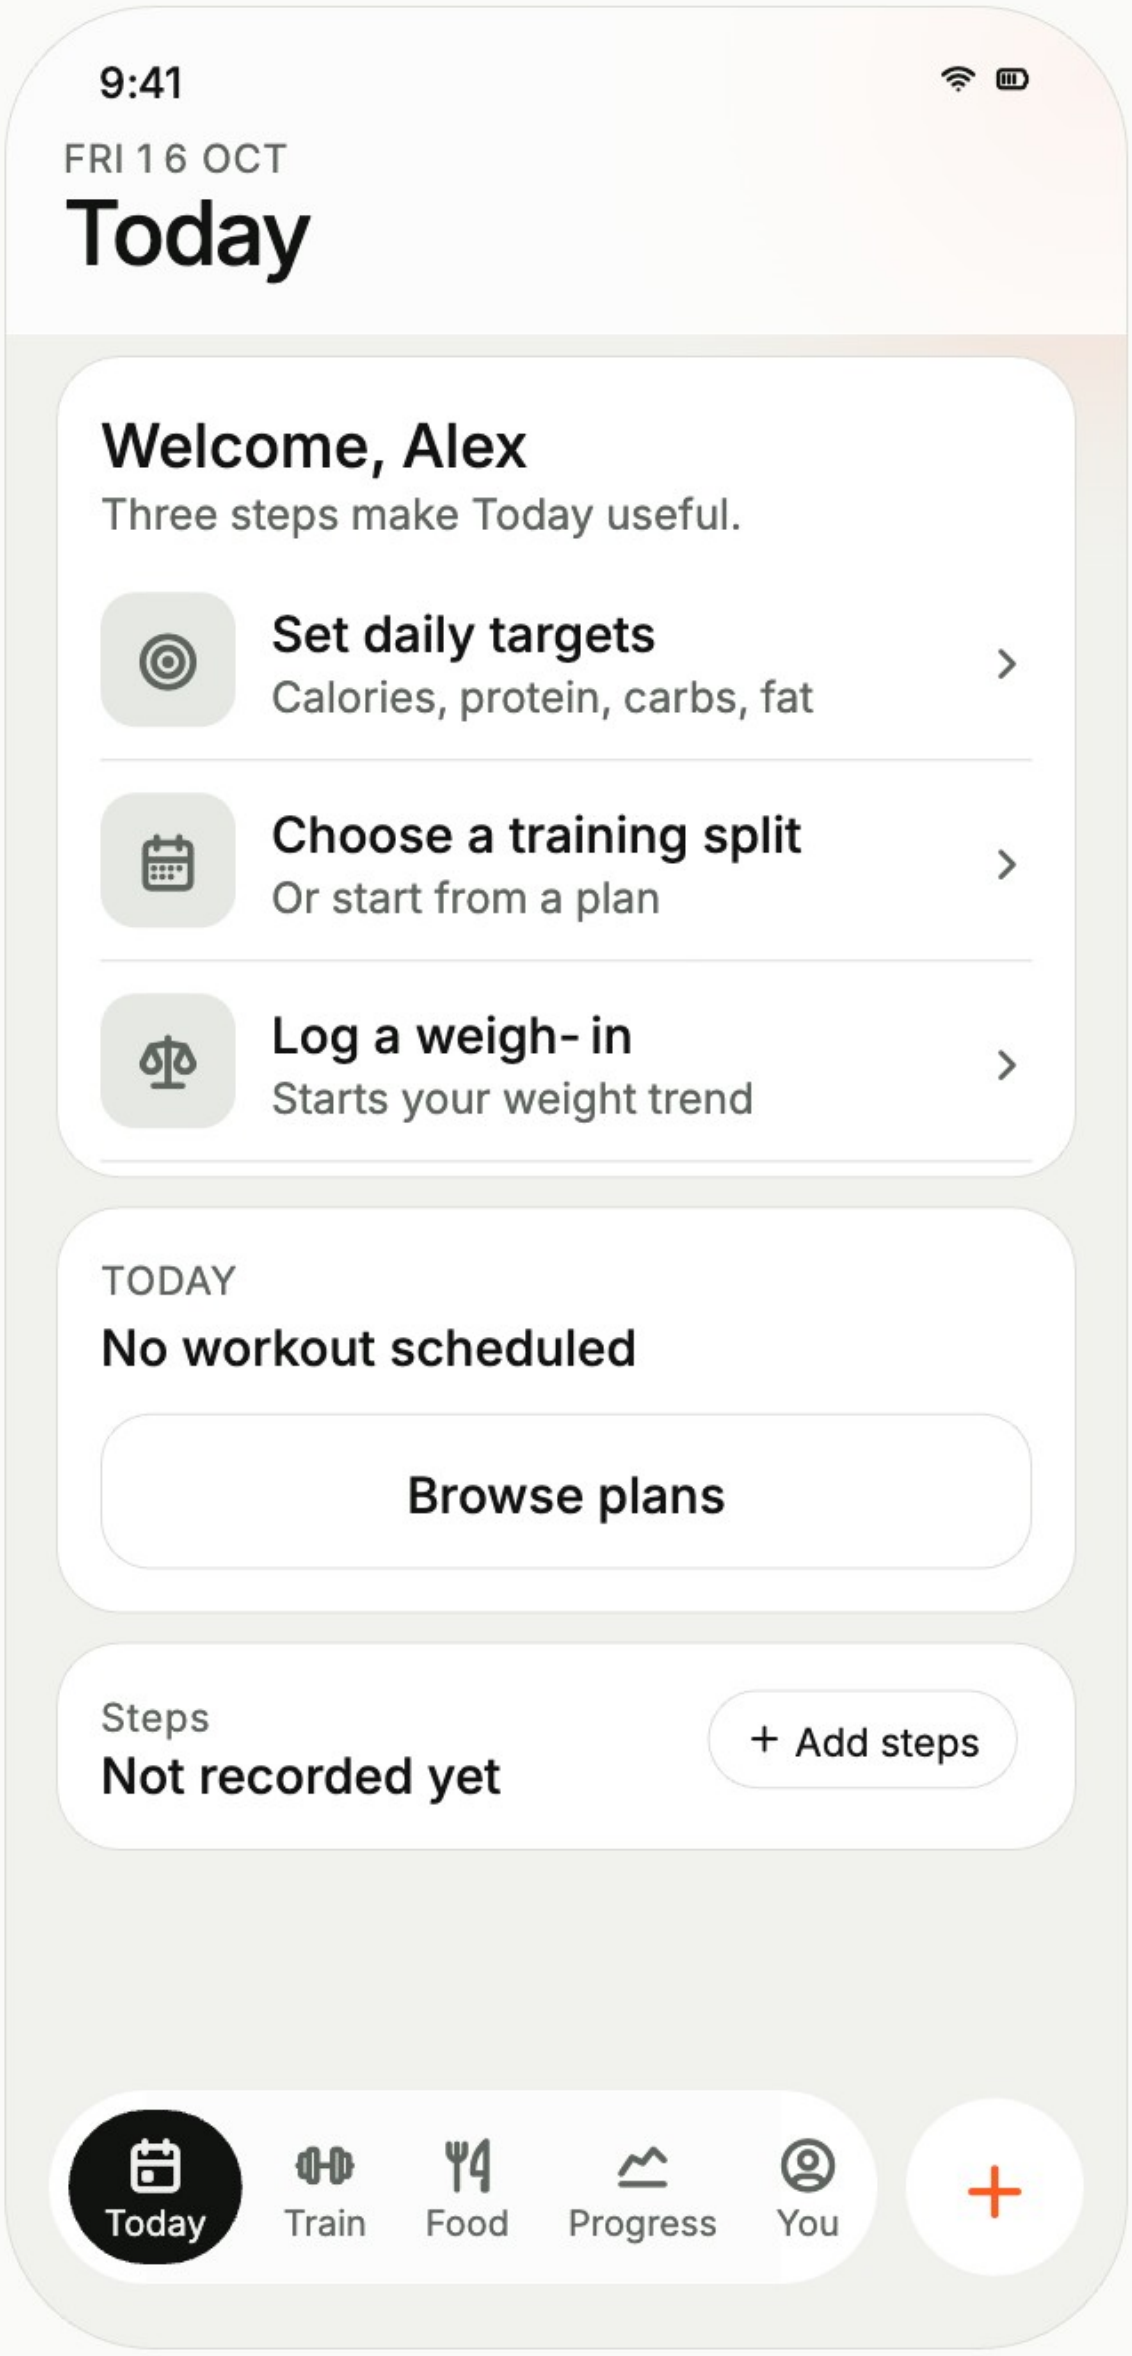

One hero: the ember training card. Bodyweight and steps keep first-class placement; habits log in one tap.

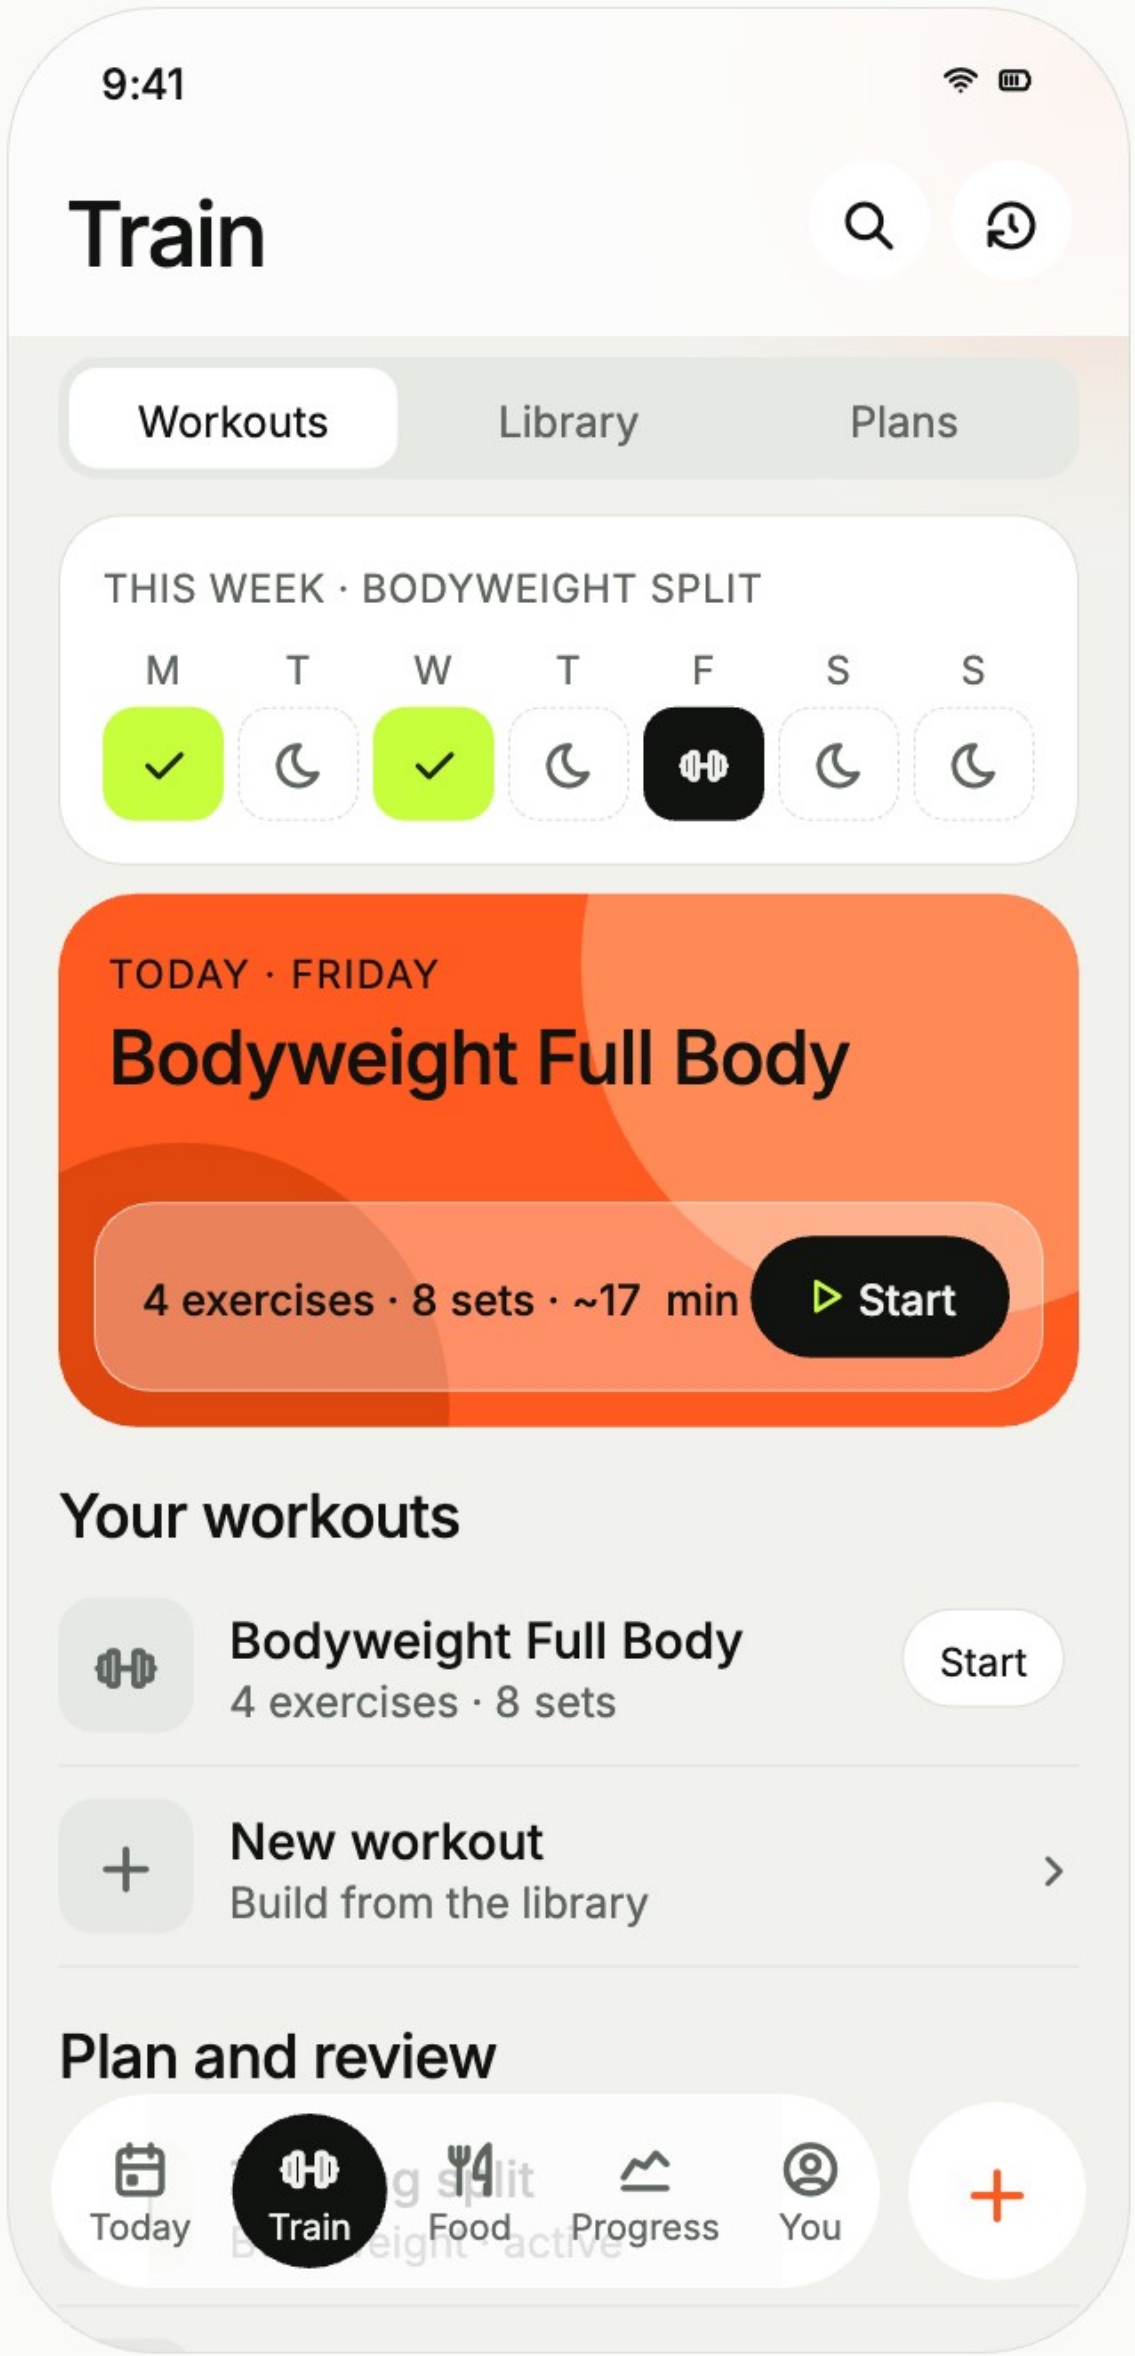

Carbon dark mode. Ember lifts to FF6A2C; done checks shift to deep volt for contrast.

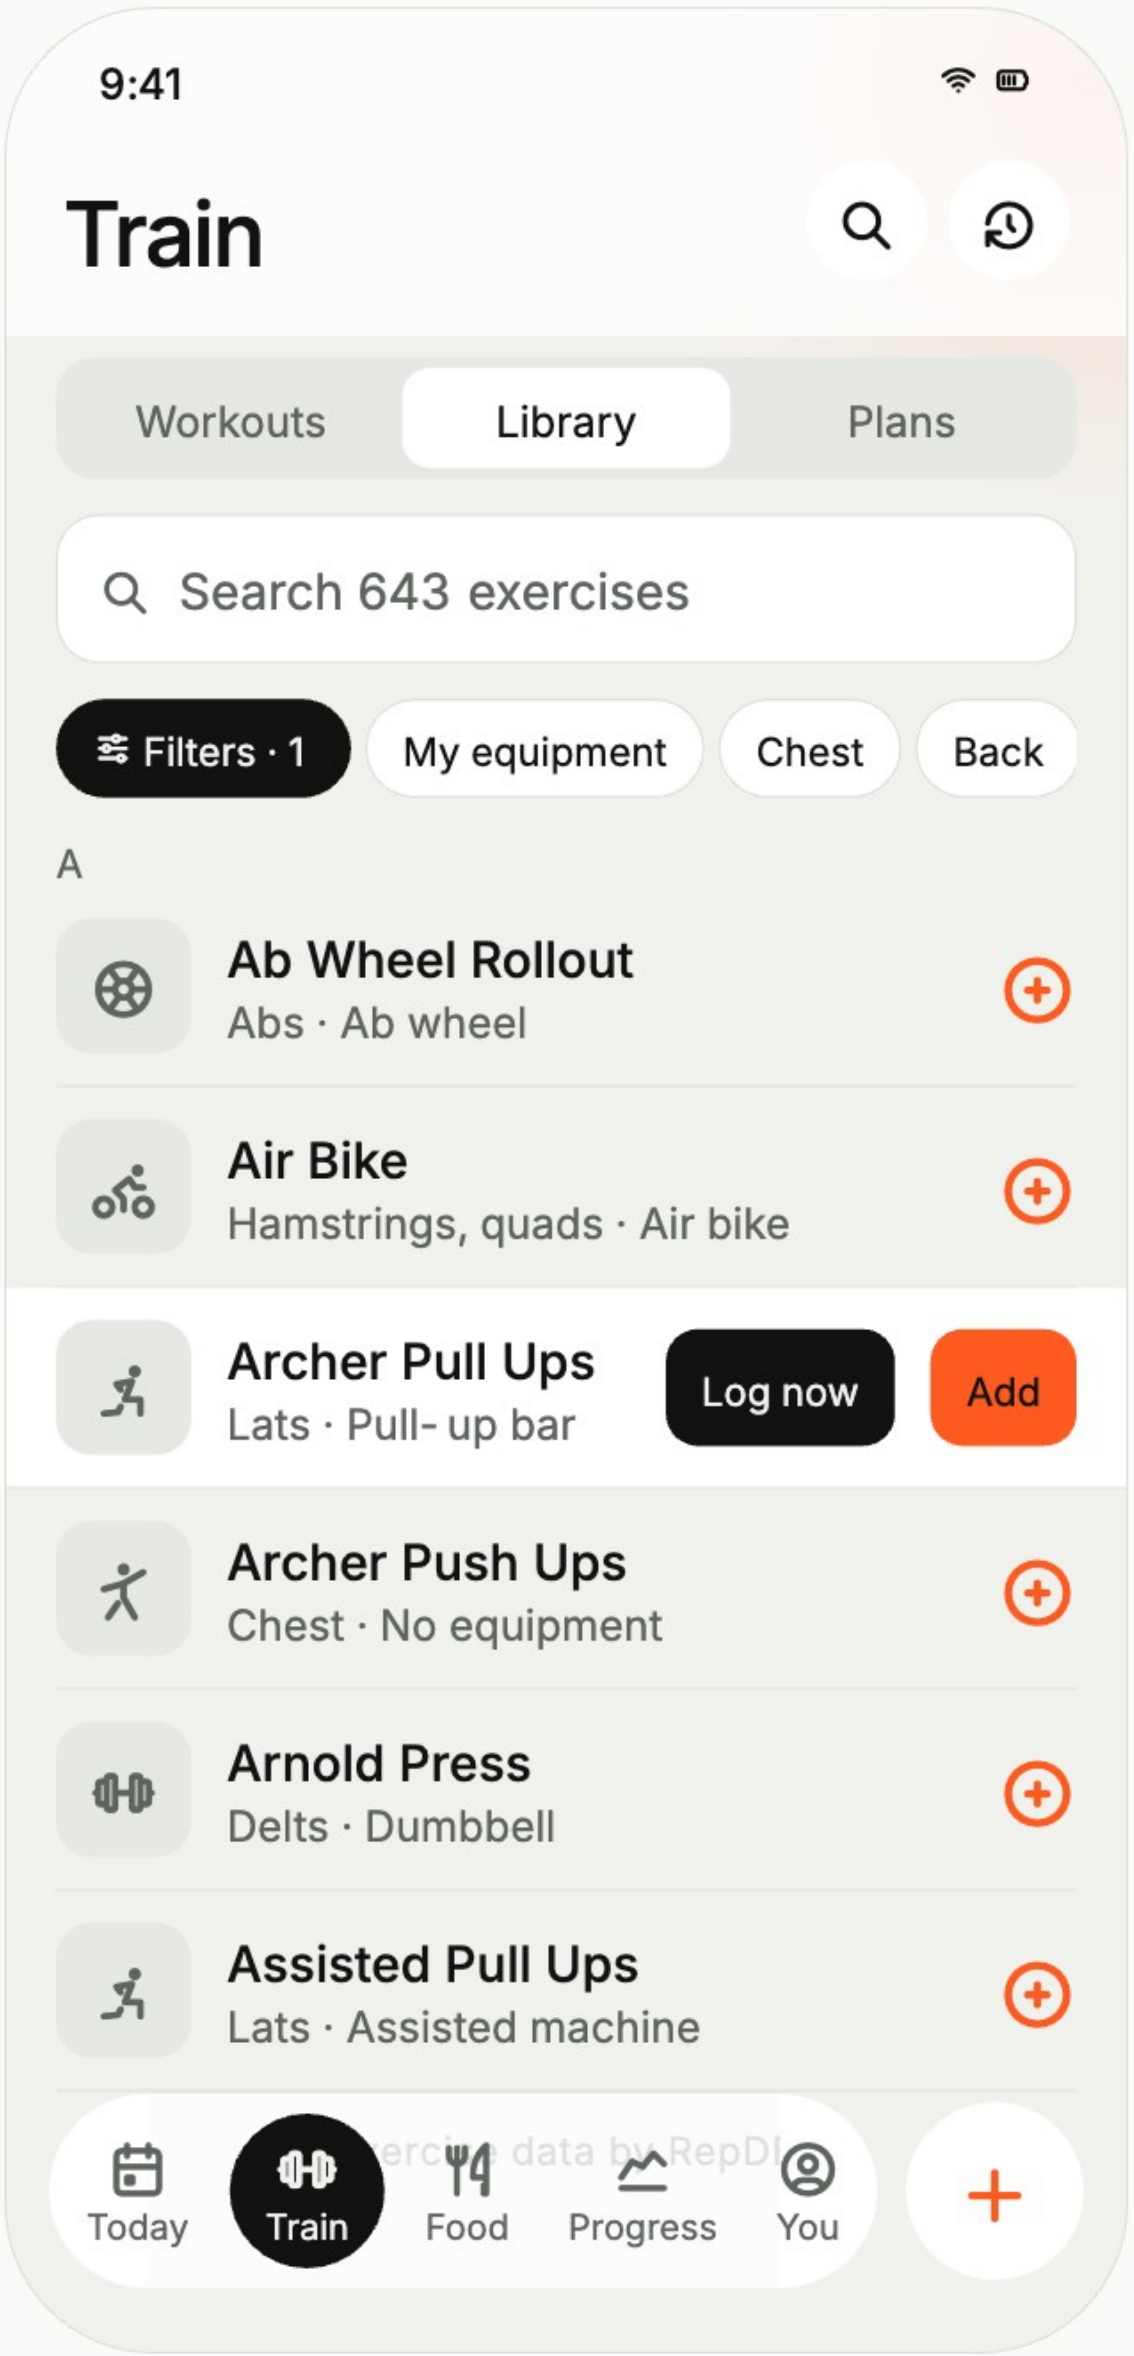

The + button opens one sheet for every frequent log, saving 2–3 taps each. Running slots in at v1.2.

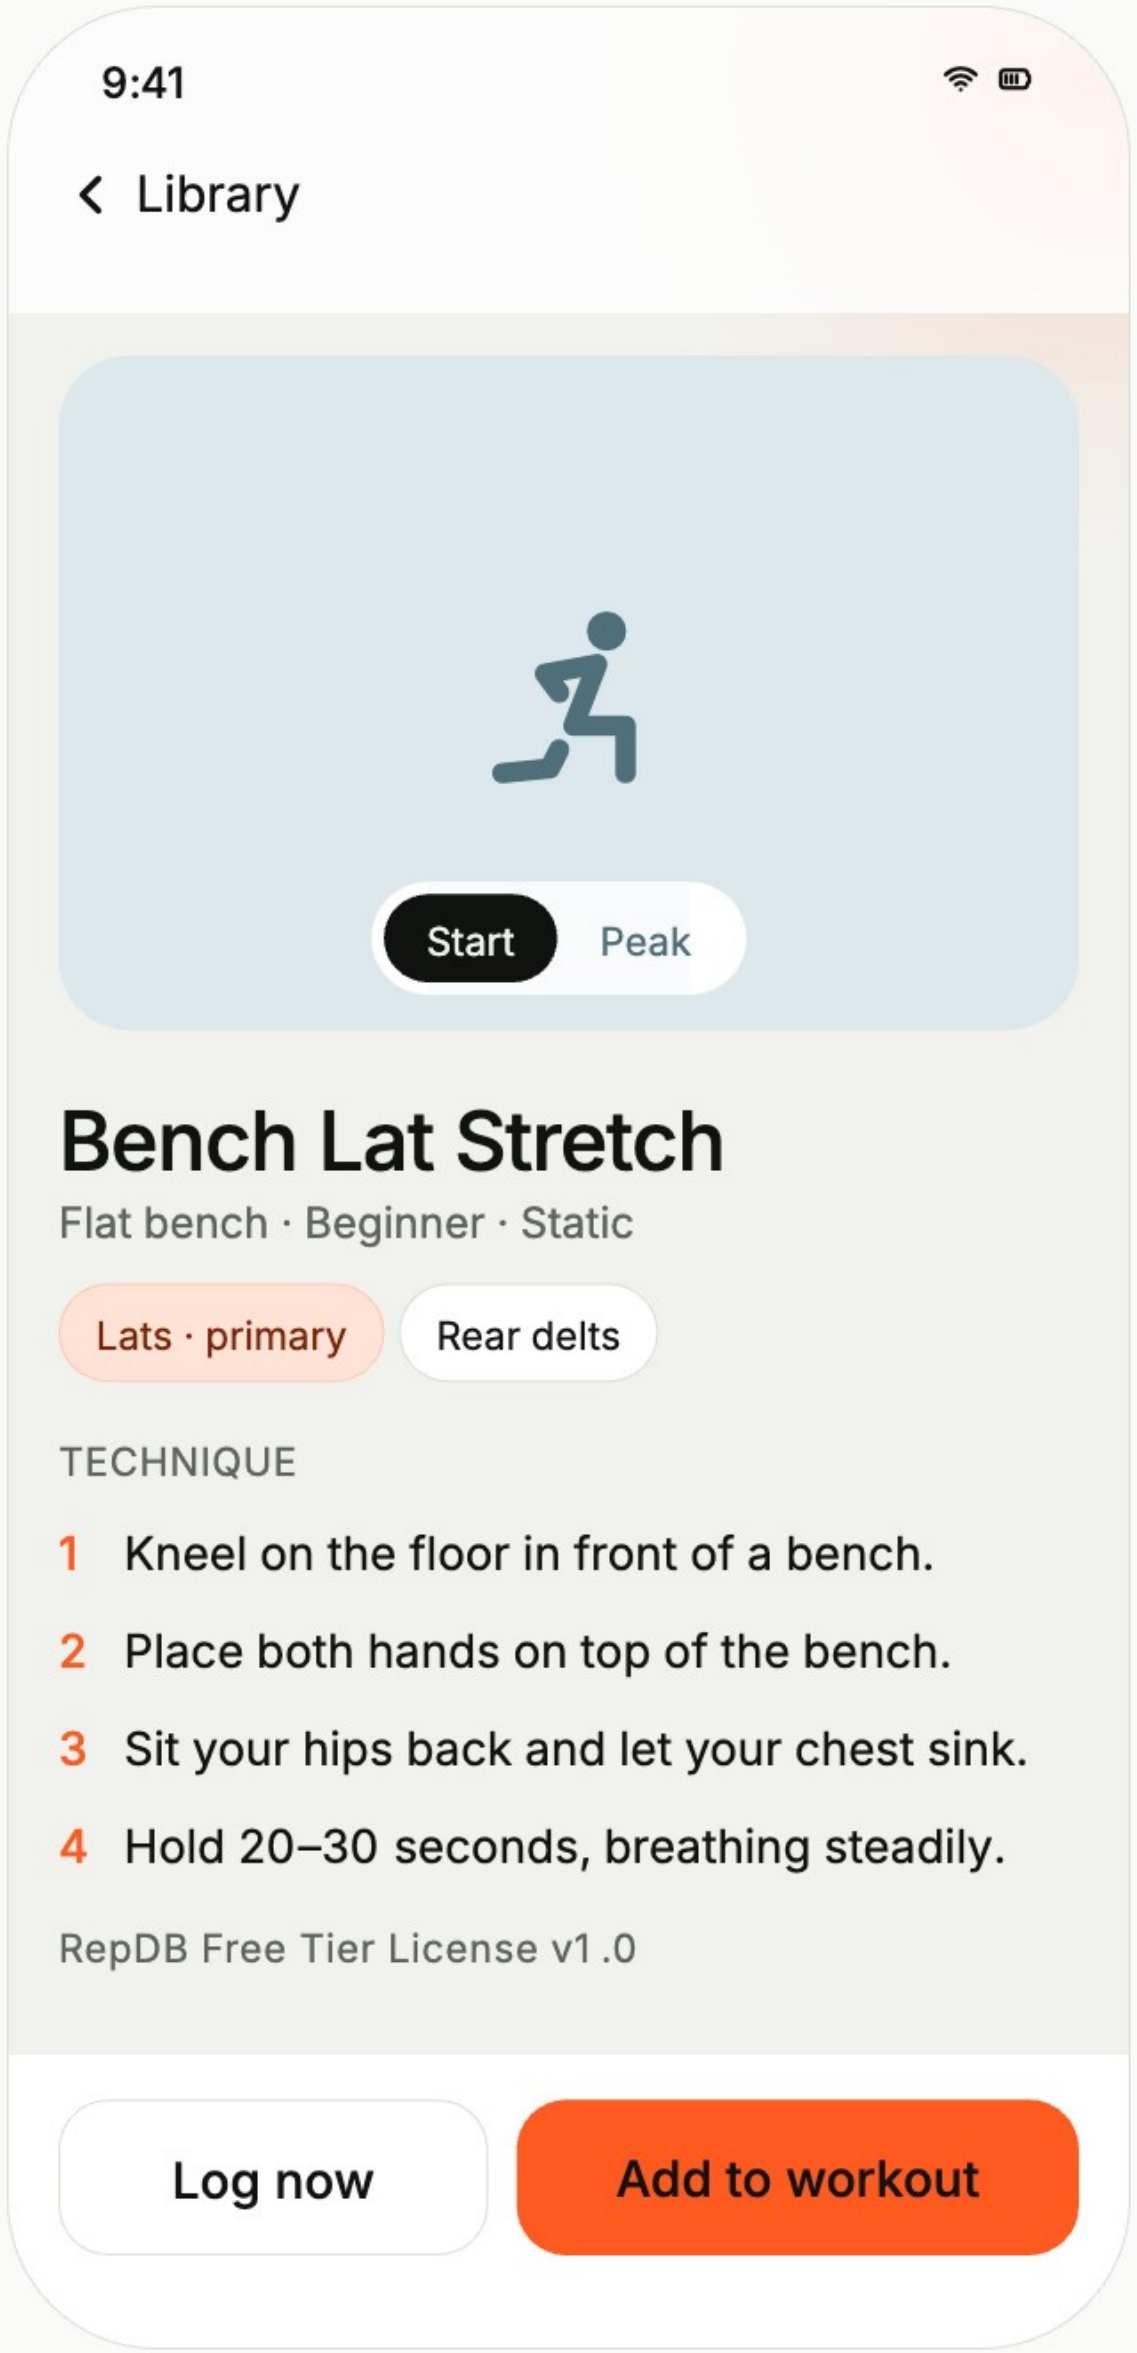

Empty Today becomes a short setup checklist instead of zeroed cards.

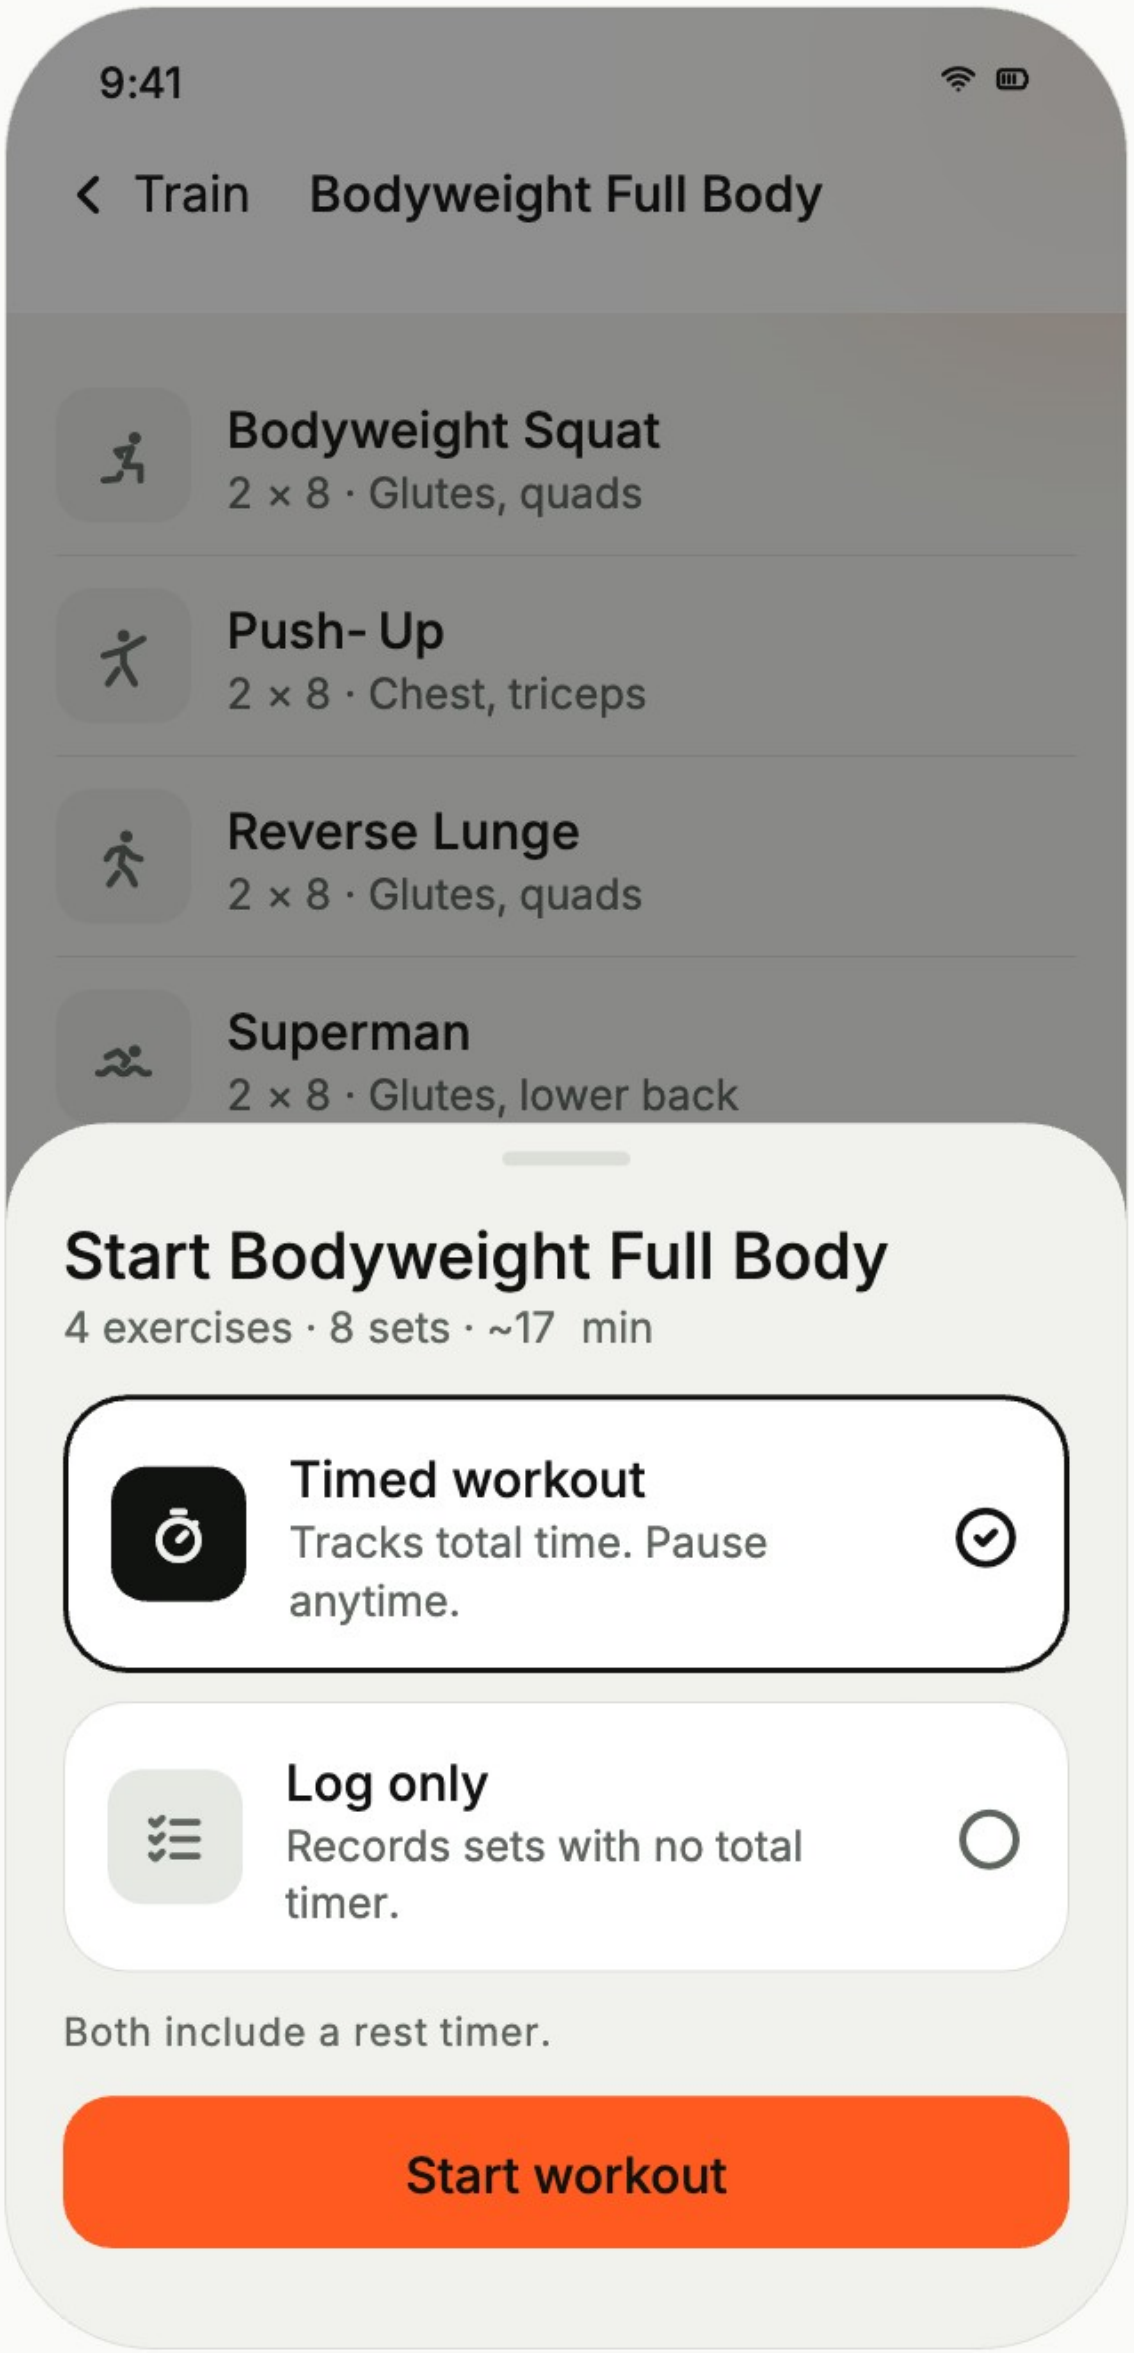

Week strip shows the split; rest days are quiet moons, not failures. Plans, split and summary one tap away.

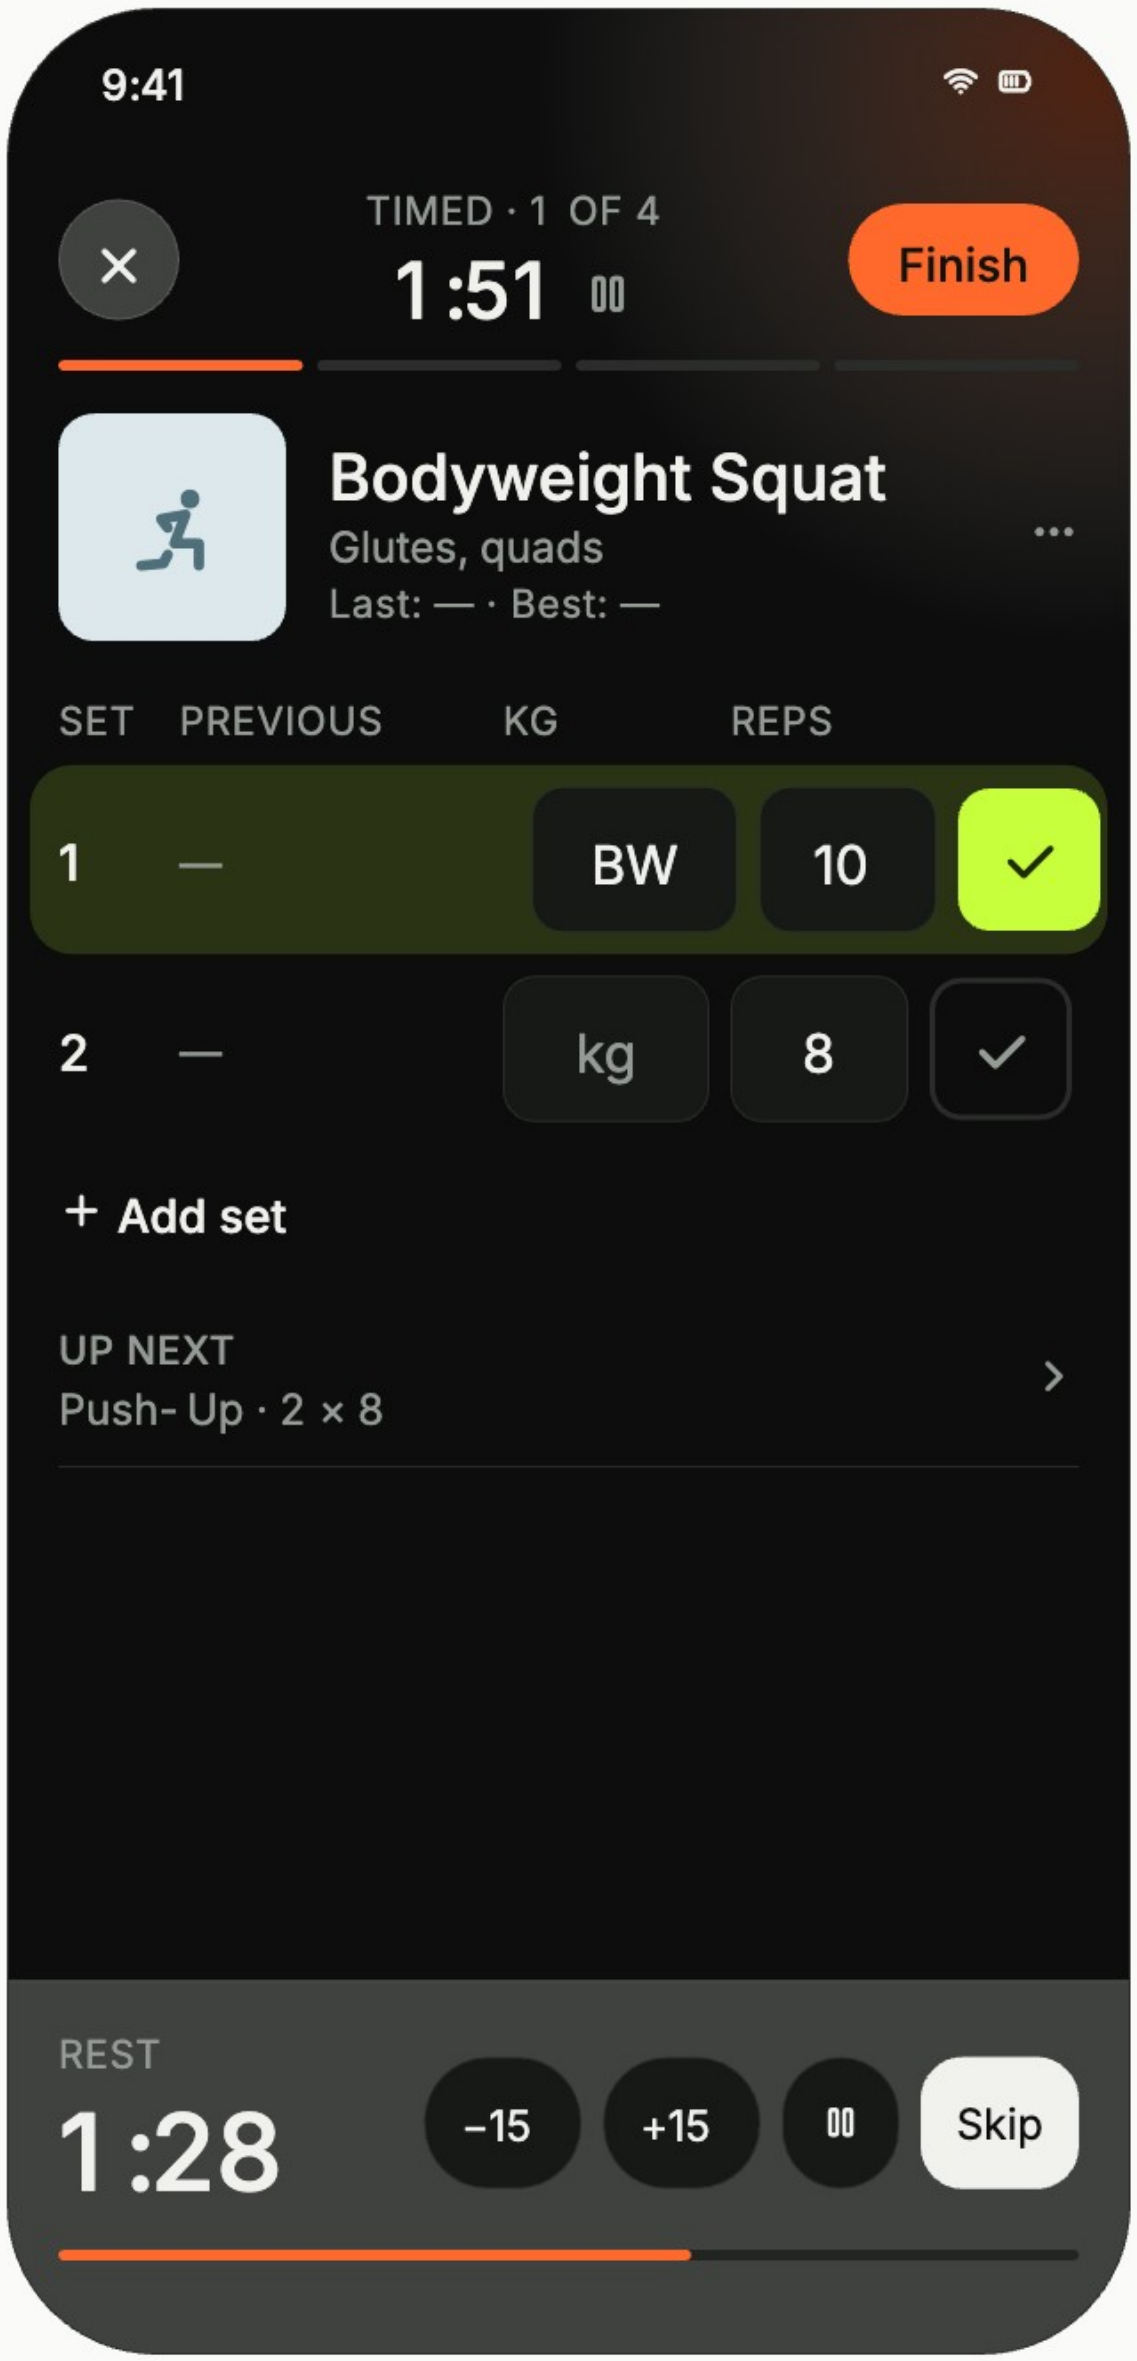

Add is one tap; swipe reveals Log now (row 3). Filters collapse to a chip with a count.

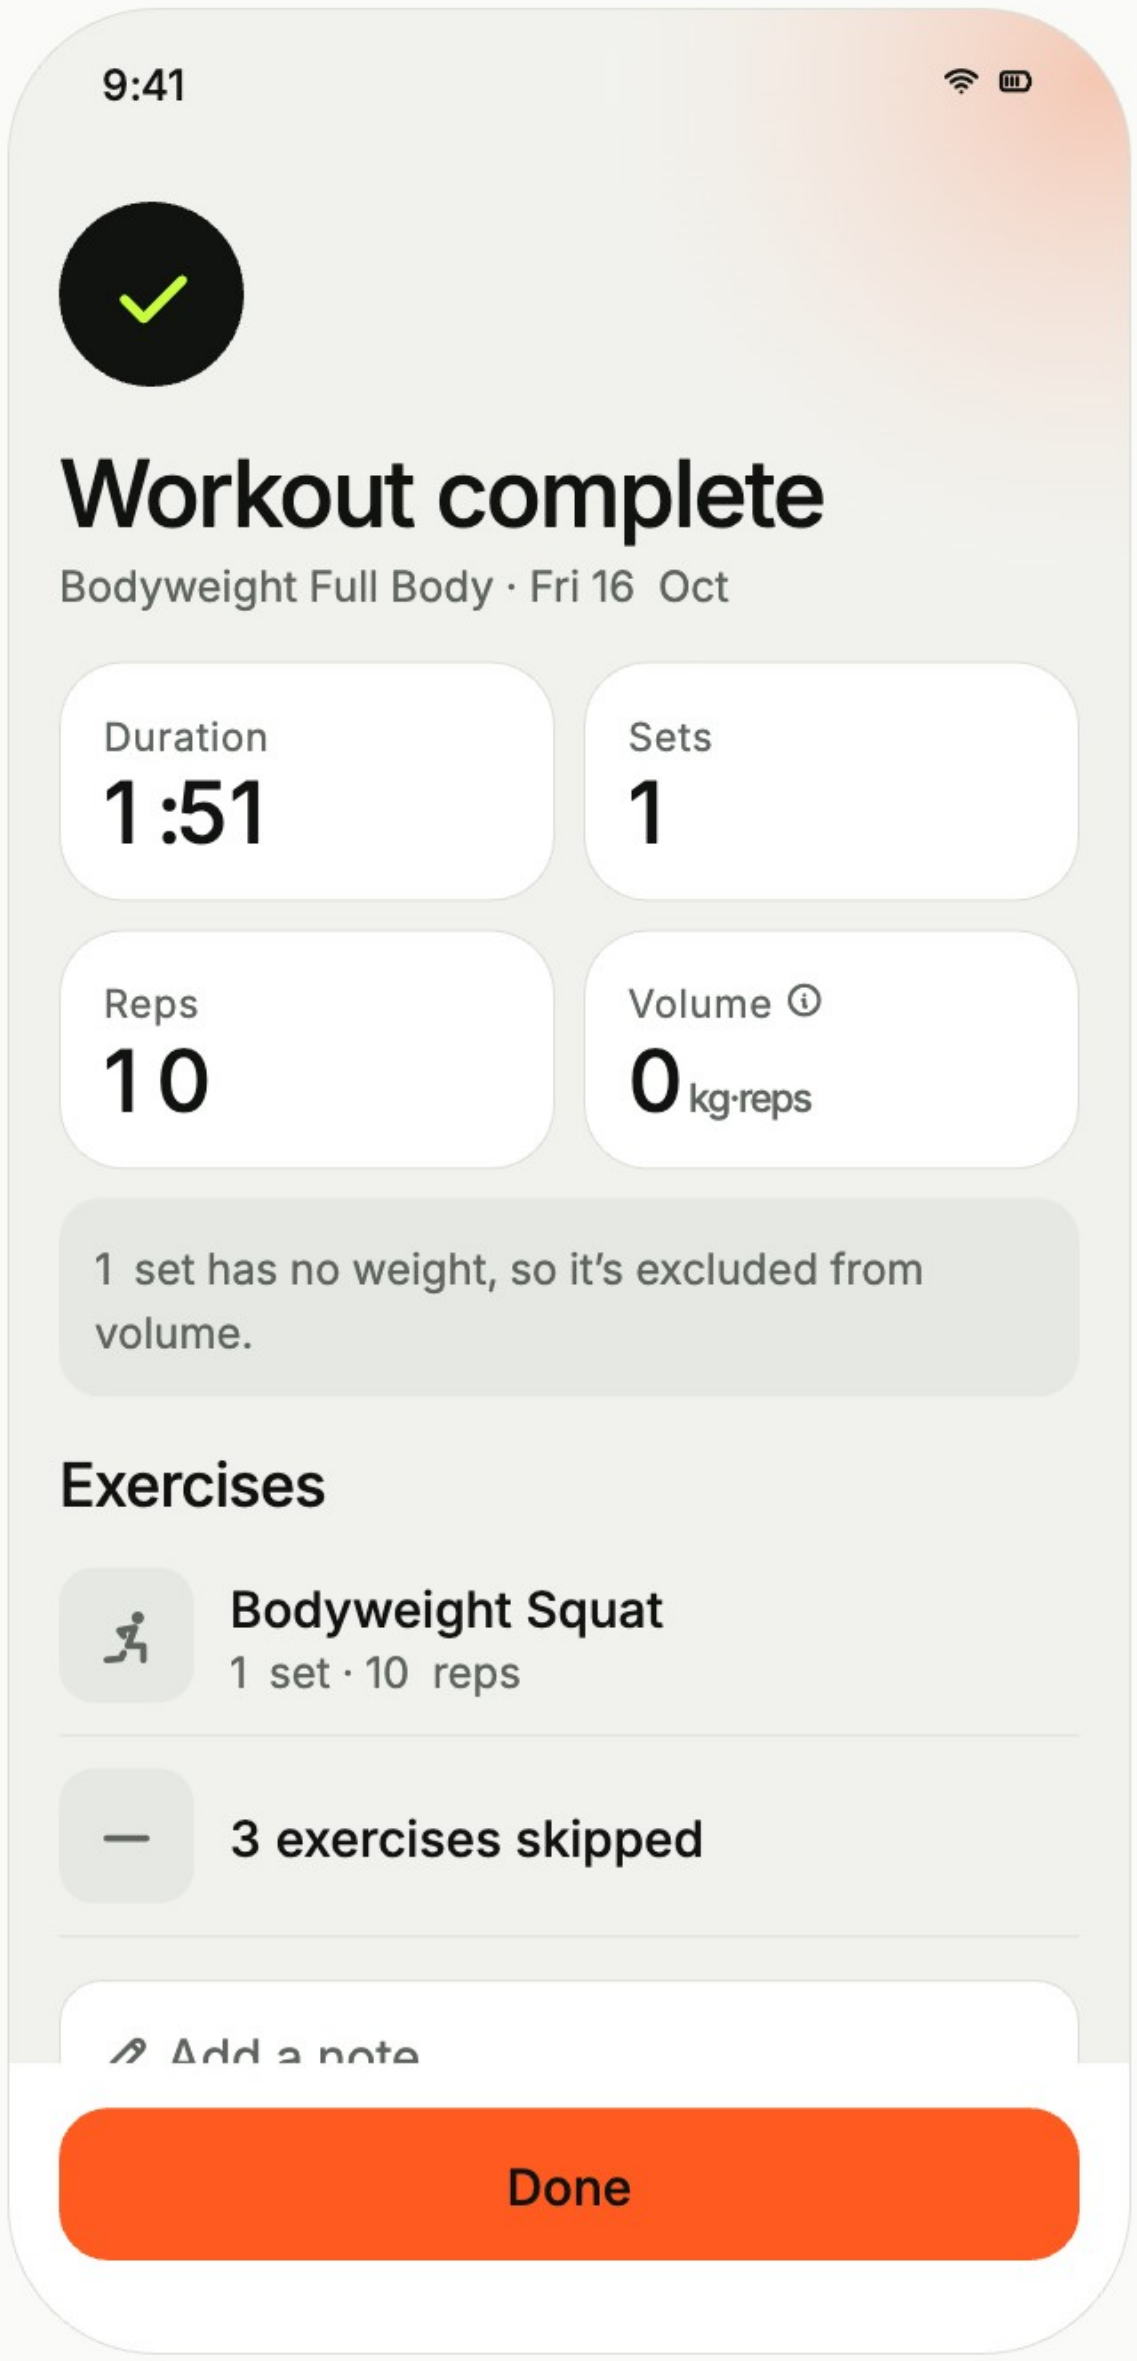

Hero media with start/peak toggle. Actions pinned in a glass bar.

Preview and Timed vs Log only merge into one sheet, saving a screen.

Session timer in the header; rest timer docks at the bottom so the set table never moves. Completed sets turn volt.

2×2 stat grid, one plain caveat. PR chips only for real records.

iPhone read appears only on iOS. Source chips per day.

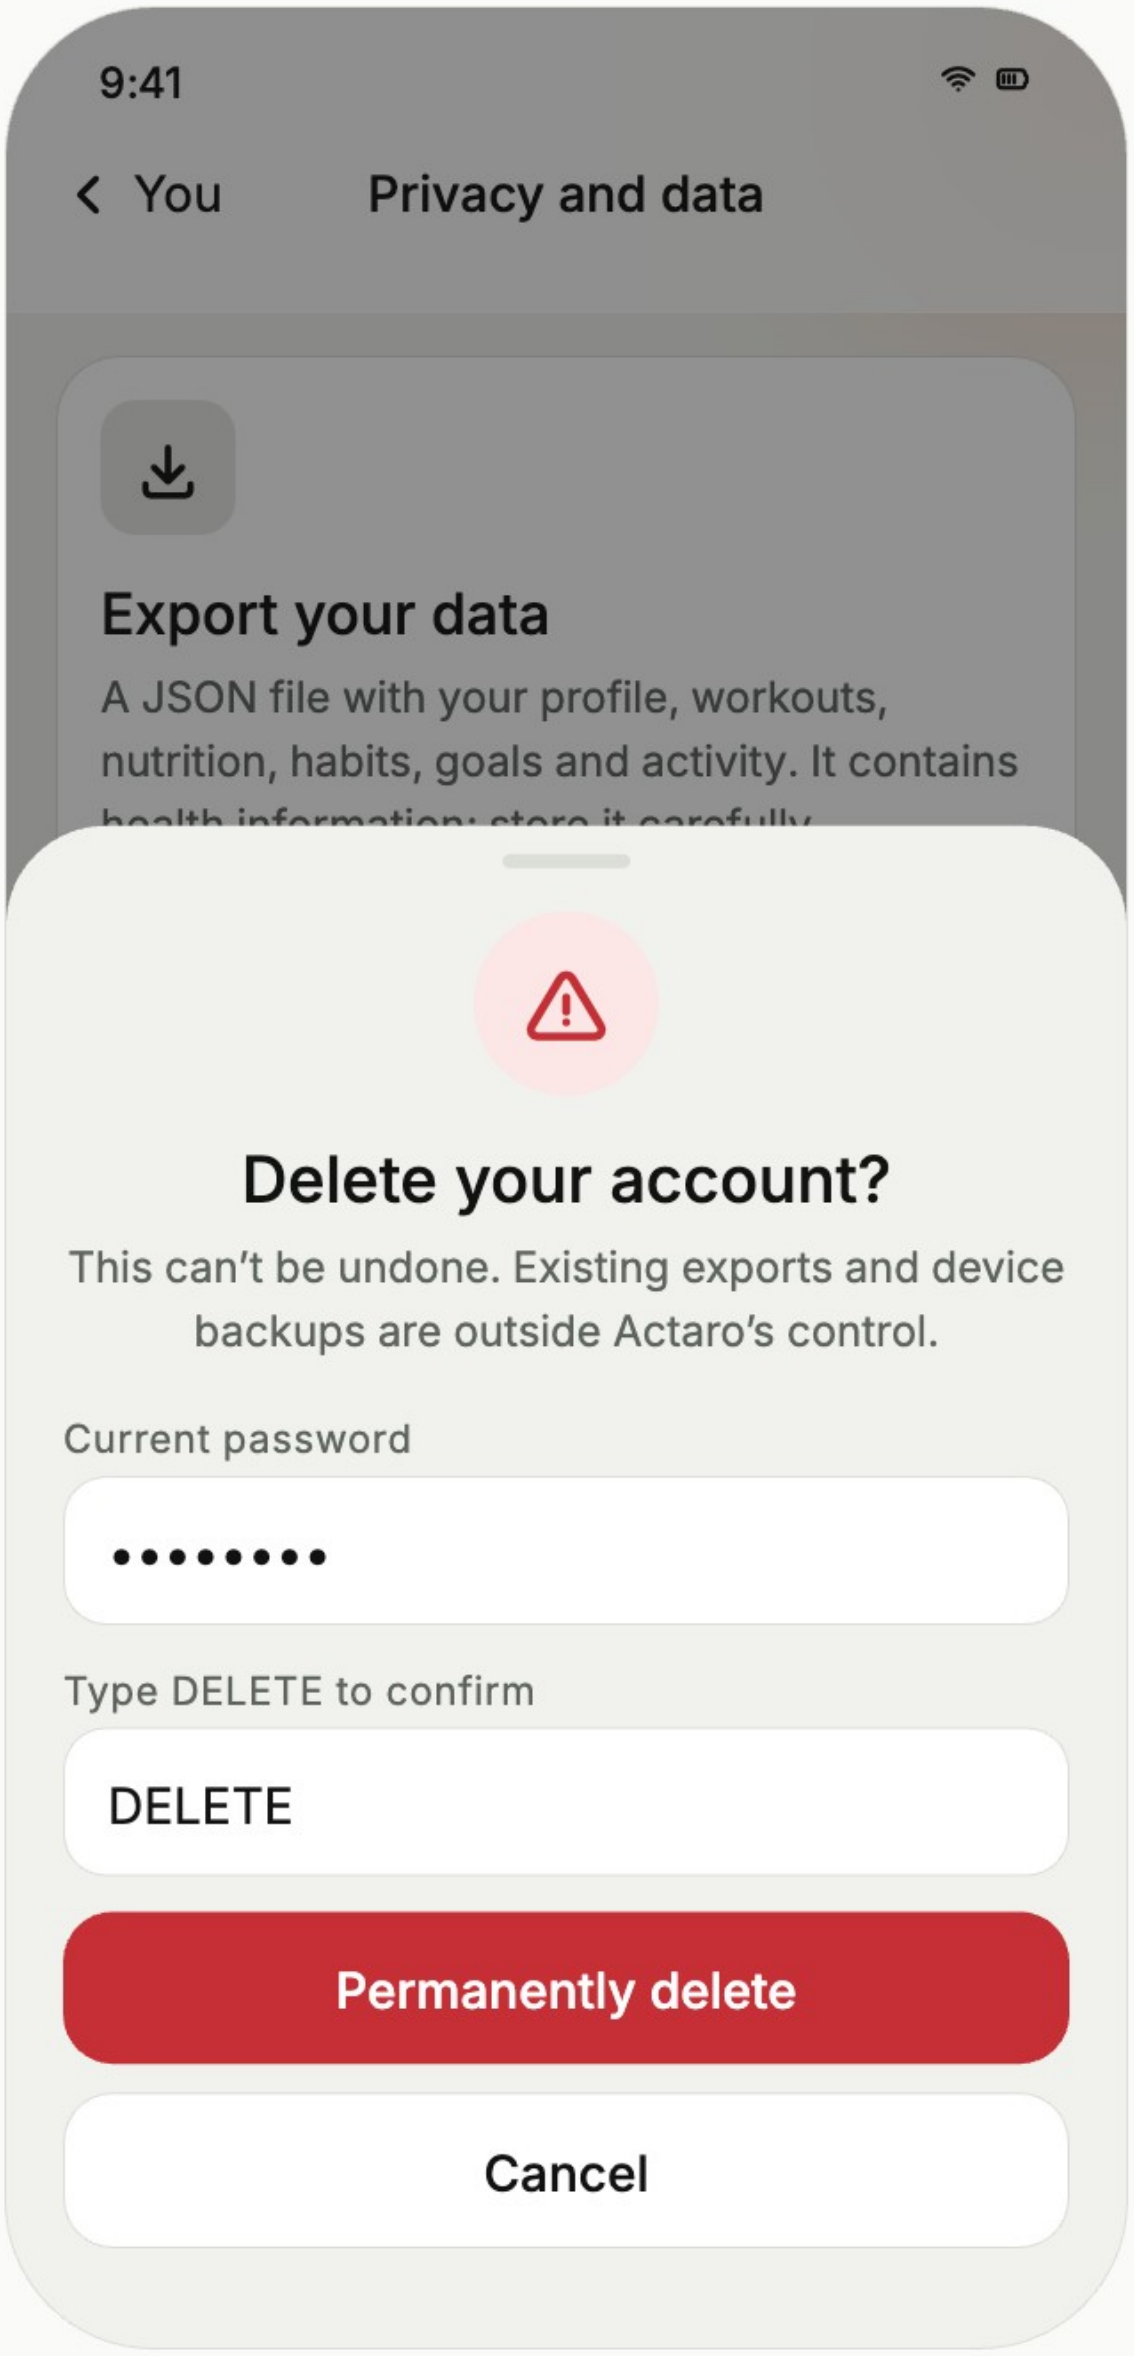

Unit pairs as compact segments; time zone as a row with Use device.

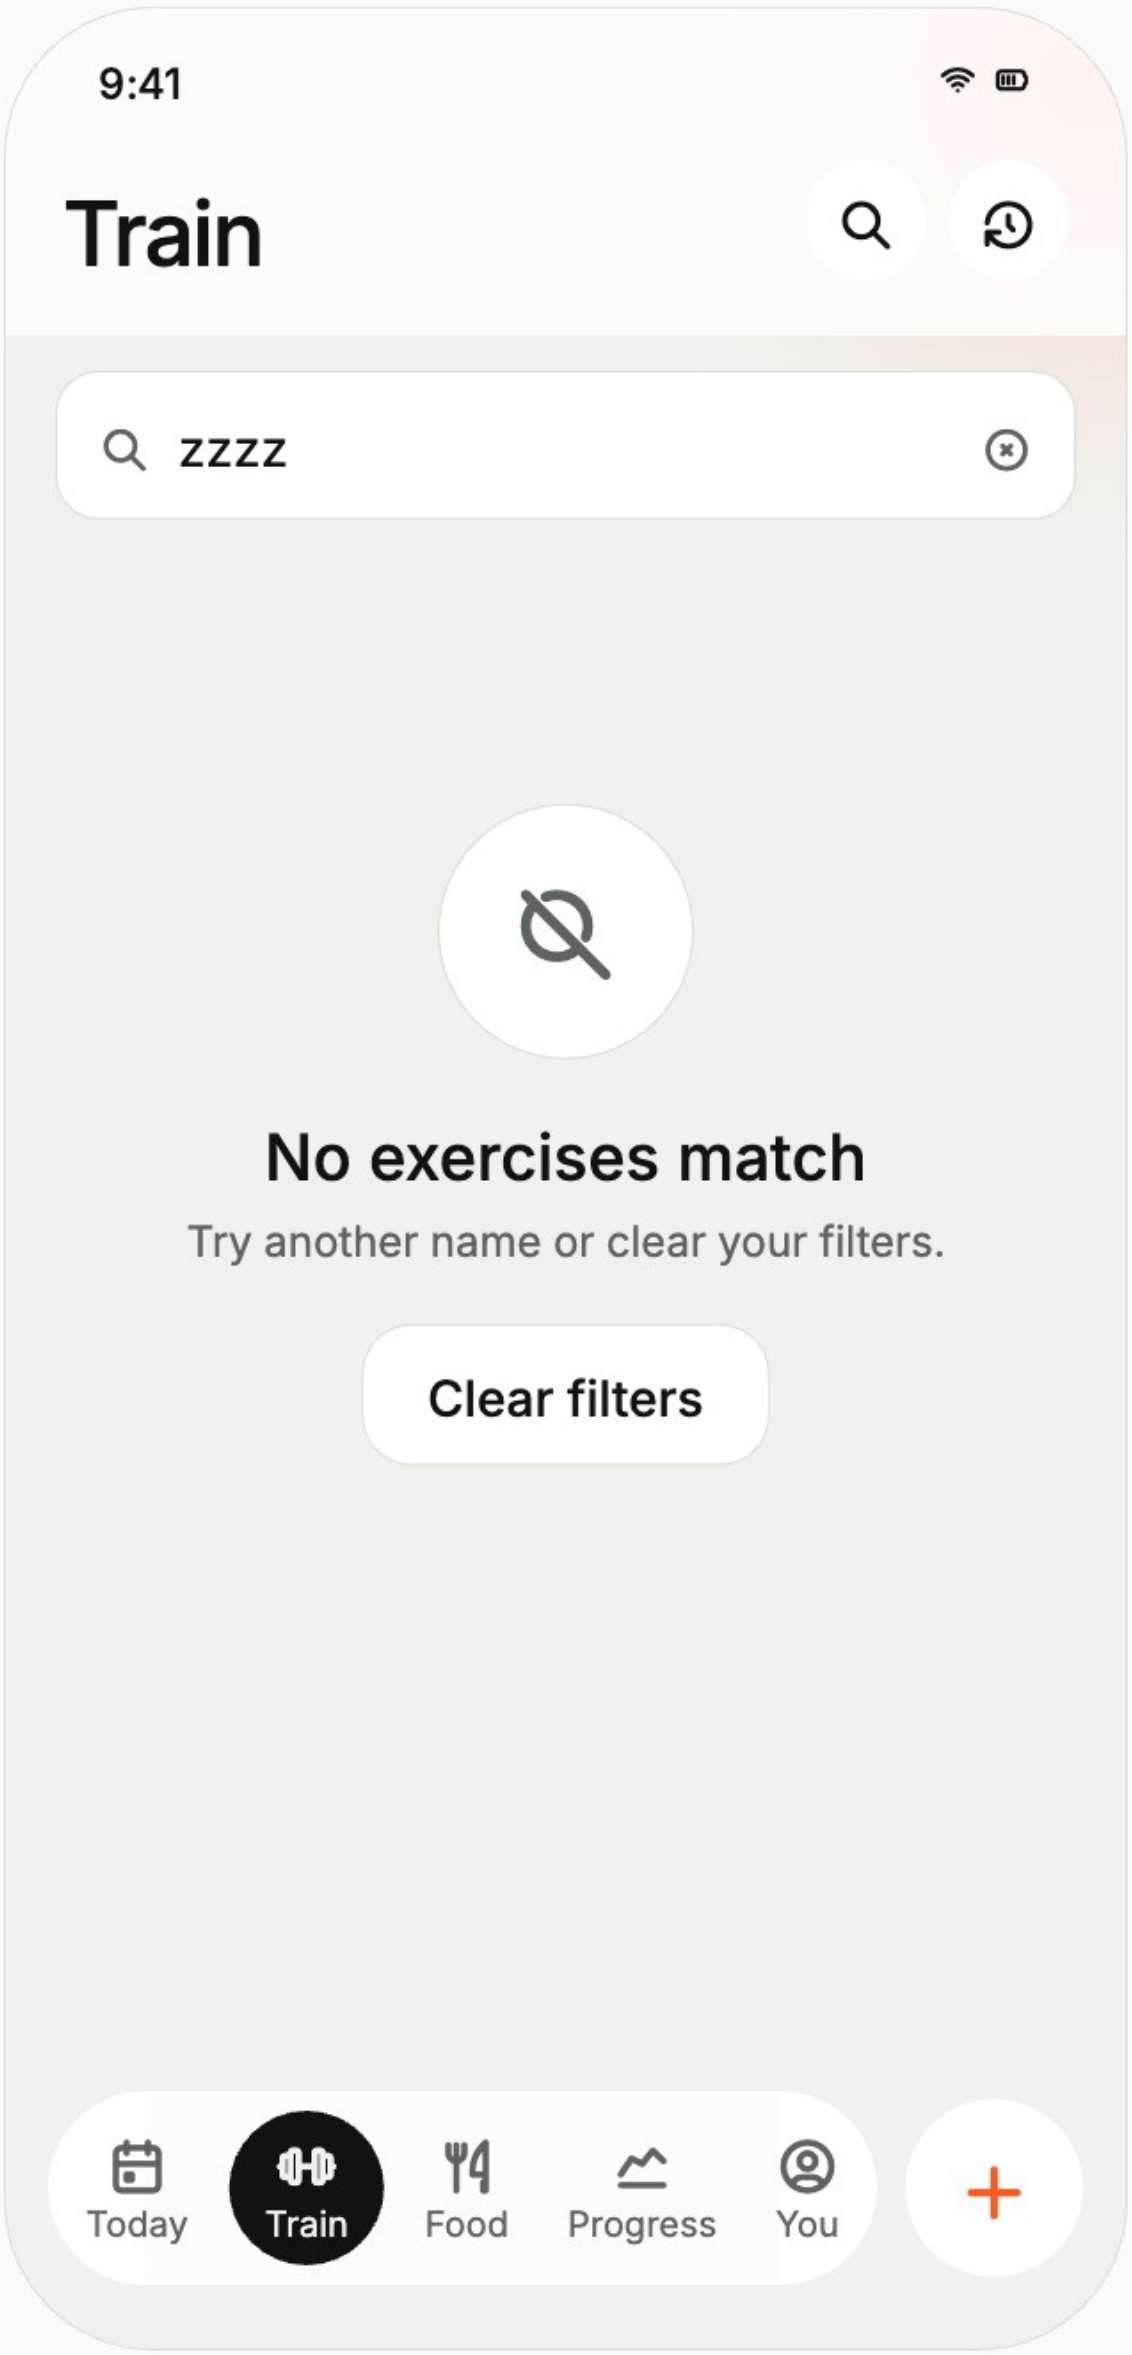

Shows exactly what is scheduled per habit.

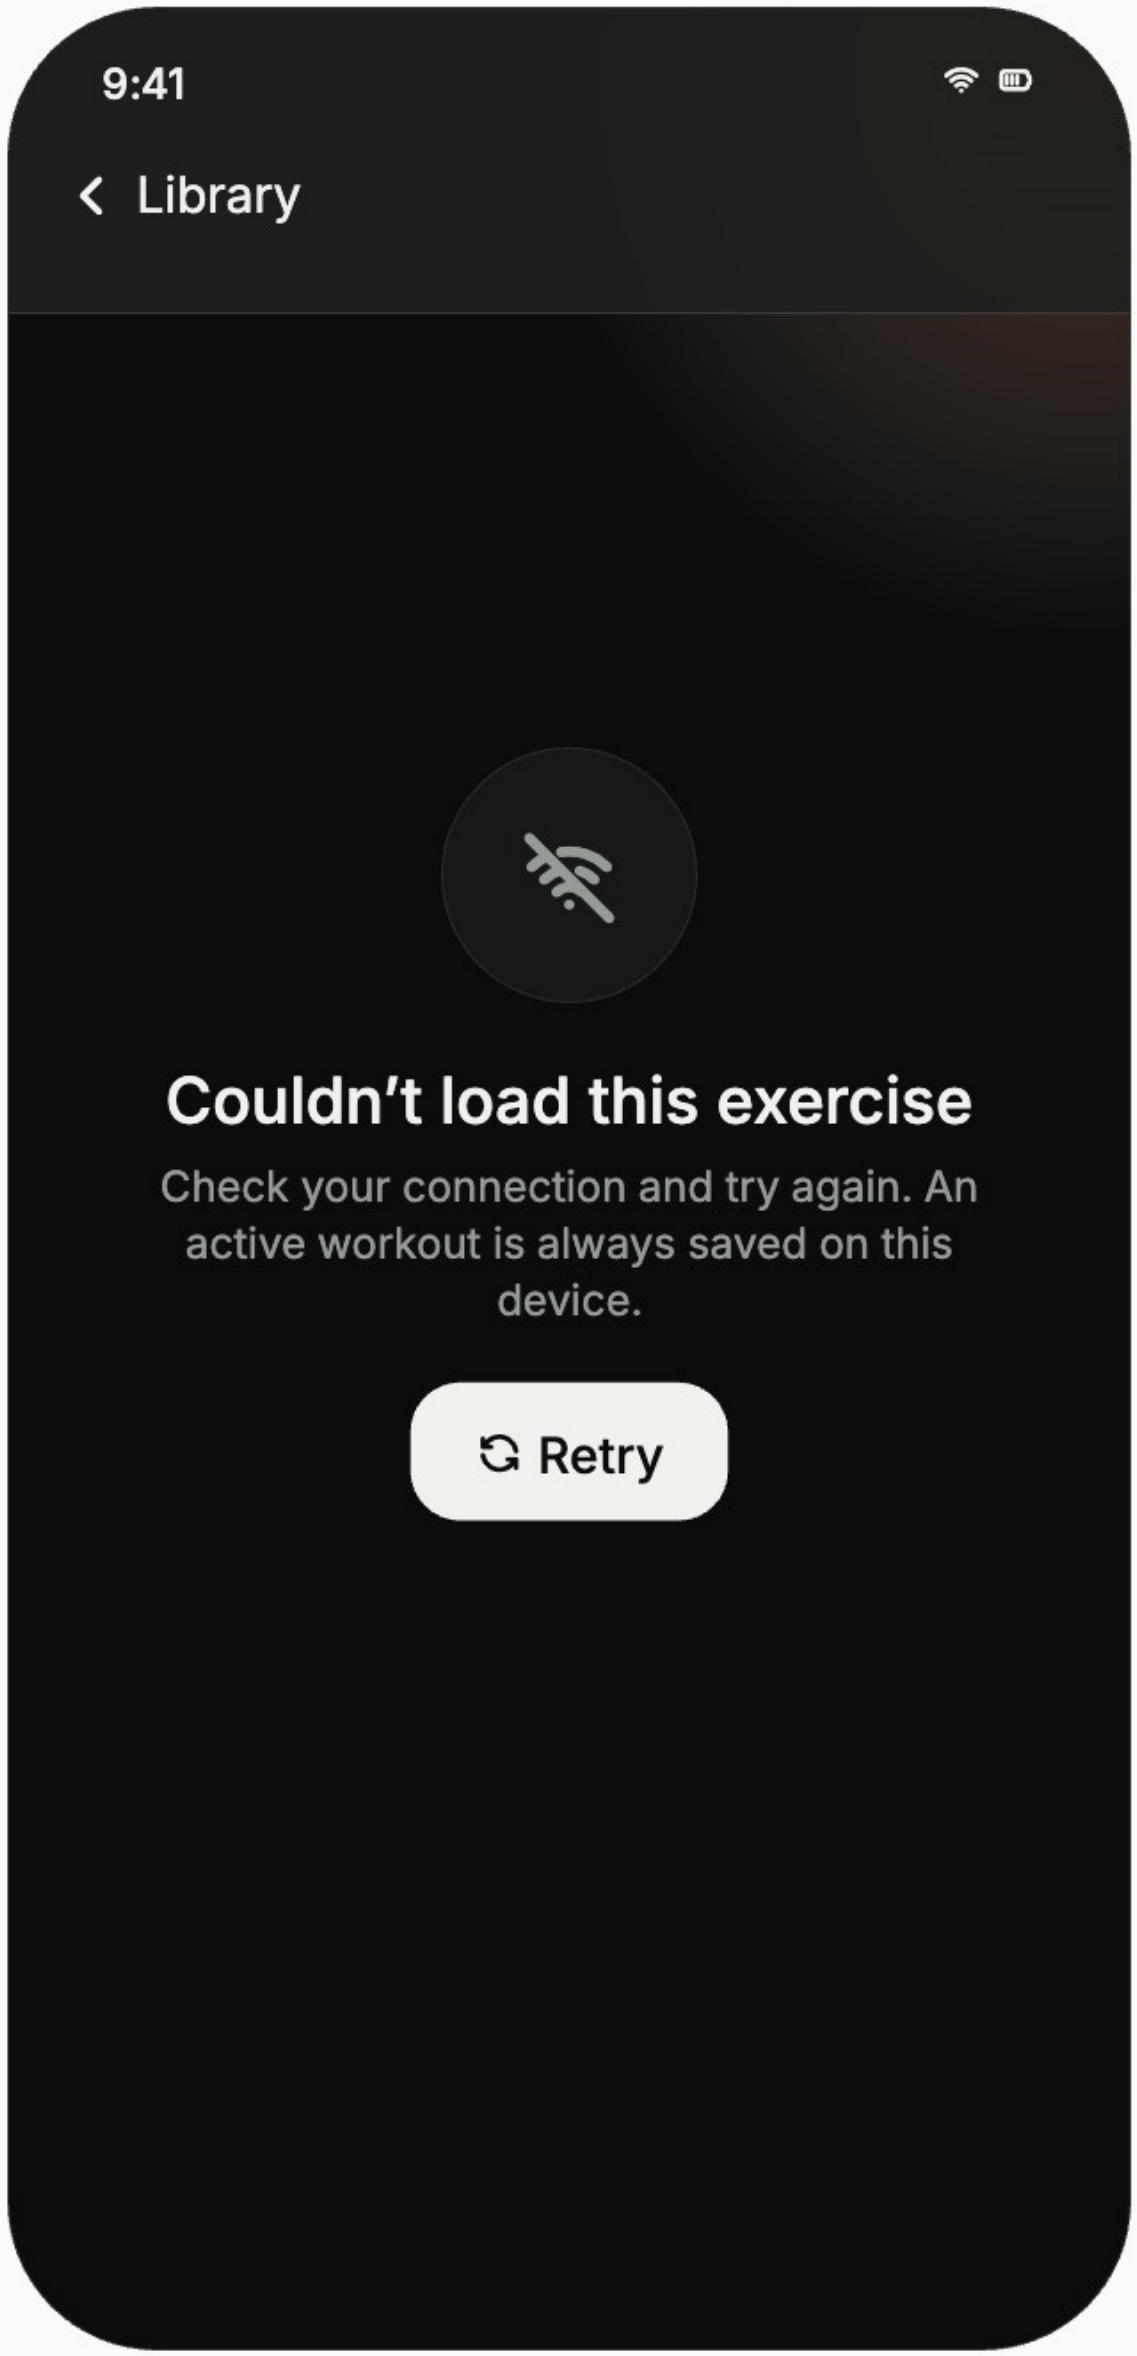

Export and delete as two clear cards.

Password plus DELETE kept. The only red fill in the app.

Empty states invite a next step.

Errors say what to do and reassure that an active workout is never lost.

Notes for building this

Source of Truth updates	Replace the palette in sections 1.0 and 4.1 with Chalk and Carbon. Change 4.1 from no glassmorphism to glass on navigation only. Change section 5 navigation to Today, Train, Food, Progress and You, plus quick log.
Glass in React Native	Use expo-blur BlurView for headers, the tab bar and pinned action bars only. Fall back to solid surface at 96% with Reduce Transparency and on low-end Android.
Tokens	Ship light and dark tokens as one theme object keyed by mode. Components read semantic names such as surface, fill, ink, muted, ember, volt and macro colors, never hex.
Interaction patterns	Swipe rows for delete and log now; sheets for portion, session mode, meal actions, habit logging, date range and destructive confirmation; steppers with tap-to-type.
Accessibility	Ink text on ember, white on danger C62F35. Volt never carries text alone. Full action names move to accessibilityLabel.
Data bug to check	The current build shows the lunch entry as 1 × g at 1,600 kcal. The design shows 1 portion; verify the unit label and seed data.
Not in this release	Run screens are v1.2 concepts. Active Minutes, achievements, food photo AI and wearables stay out of v1.
